JASON ABLOTT

TECHNICAL PRODUCT MANAGER · SOFTWARE ENGINEER

Salt Lake City, UT · ablottjason@gmail.com · jasonablott.com · linkedin.com/in/jasonablott · github.com/jasonablott

Technical PM and software engineer with a Master's in Software Development (4.0 GPA) and a B.S. in Geological Engineering. I write production code, read pull requests, and can lead a meaningful conversation in a sprint planning session. My background spans geological engineering, enterprise program management, and full-stack and systems-level (C++) development. This gives me the range to translate business and customer needs into technical requirements, bring structure to ambiguous problems, and communicate clearly as a partner with both engineers and non-technical stakeholders.

CORE COMPETENCIES

- Technical Writing
- Requirements Definition
- API & Systems Design
- Cross-functional Stakeholder Management
- Roadmapping & Prioritization
- Process Improvement & Workflow Design
- Java / TypeScript / Python / C++
- REST APIs · SQL · React
- Technical Documentation & Specs

EXPERIENCE

Founder and Technical Product Manager

Uinta Software LLC · Salt Lake City, UT — *June 2026 – Present*

- Own end-to-end product vision, scope, and feature backlog for CAPE Weather, partnering directly with a full-stack software engineer to execute development sprints in Jira.
- Conduct user discovery interviews to gather feature feedback, define UX state requirements, and create interactive mockups in Figma.
- Author technical specifications for async REST API edge-case handling and data caching, driving release workflows toward public deployment on the Apple App Store and Google Play.

Program Manager

David Eccles School of Business, University of Utah · Salt Lake City, UT — *July 2019 – Present*

- Serve as the operational and technical bridge between academic leadership, internal IT, and external vendors, translating business goals into executable technical requirements and vice versa supporting over 7,000 students, staff, and faculty.
- Implemented process improvements cutting operational costs by 20% while increasing delivery throughput and operational efficiency by 30%.
- Own vendor relationships end-to-end: scope requirements, evaluate technical fit, and manage ongoing service.

SELECTED PROJECTS

CAPE Weather App | *React Native · TypeScript · Expo · REST APIs*

- Led full product lifecycle from ideation through implementation: defined scope, designed UX flows, and wrote technical specs for async API edge-case handling and offline data caching to ensure performance and reliability.

MSDscript Interpreter | *C++*

- Designed and built a custom language interpreter from scratch. Defined functional specs for parsing, scoping, and AST execution, then implemented them with full automated test coverage and zero memory leaks.

EDUCATION

Master of Software Development

University of Utah · Salt Lake City, UT — *Dec 2025*

GPA: 4.0 - Coursework: Operating Systems (system calls, assembly, multithreading, memory management, introduction to GPU/CUDA programming concepts), Systems Architecture, Databases, Algorithms, Software Engineering, Programming Languages

B.S. Geological Engineering - Cum Laude

South Dakota School of Mines and Technology · Rapid City, SD — *Aug 2017*

GPA: 3.7 - Foundation in complex systems modeling, data collection and analysis, and quantitative decision-making under uncertainty. Experience in ArcGIS, AutoCAD, and specialized geological modeling software.
